

Ideation Phase

Brainstorm & Idea Prioritization

Date	30 September 2026
Team ID	SWTID-2026-4540
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization:

The project “**Import Data using Transform Maps (Spreadsheets)**” focuses on importing spreadsheet data into ServiceNow in a structured and efficient way. During brainstorming, the team identified ideas such as preparing spreadsheet data, selecting the correct import set table, uploading the spreadsheet, mapping source fields to target fields, creating transform maps, validating imported records, handling data errors, and reducing manual data entry. Based on these ideas, the proposed solution is to use ServiceNow Import Sets and Transform Maps to import spreadsheet records, map the required fields to the target table, transform the data, and verify the imported records. This helps reduce manual effort, save time, improve data accuracy, and make the overall data import process more efficient.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Import Data using Transform Maps (Spreadsheets)

Use this template in your own ServiceNow project sessions to guide your team in importing data from spreadsheets into ServiceNow using Transform Maps. This helps you plan, collaborate and organize the steps for a successful data import.

10 minutes to prepare

1 hour to collaborate

2-8 people recommended

1 Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

A Team gathering

Gather your team, understand the project requirements and assign roles (data owner, mapper, validator, etc.). Make sure everyone is familiar with the spreadsheet and ServiceNow import process.

B Set the goal

Define the objective of the import. Identify the ServiceNow table, the spreadsheet source and the expected outcome (e.g., number of records, accuracy, fields to be imported).

C Prepare the spreadsheet

Clean and verify the spreadsheet data. Ensure correct headers, data formats and no blank/invalid values. Save the file in the required format (e.g., CSV or XLSX) and make it ready for upload in Transform Maps.

2 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorming.

PROBLEM STATEMENT

How might we import spreadsheet data into ServiceNow using Transform Maps accurately and efficiently?

Key rules of brainstorming

To run an smooth and productive session

- 1 Verify spreadsheet data (correct format, headers, data **types**).
- 2 Map fields correctly (spreadsheet ↔ ServiceNow).
- 3 Validate imported records (check errors & logs).
- 4 Avoid duplicates (use unique identifiers).
- 5 Review import results (compare counts and data).

Step-2: Brainstorm, Idea Listing and Grouping

Import Data using Transform Map (Spreadsheet)

2 Brainstorm, Idea Listing and Grouping

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

Tip
You can select a sticky note and edit the text, duplicate it, or move it to a group.

3 Group Ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the next 10 minutes, give each cluster a clear label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

Step-3: Idea Prioritization

Problem Statement:

Import dataset using Transformer Spreadsheet.
