Problem – Solution Fit

The Problem-Solution Fit for the Import Dataset Using Transformer Spreadsheet project means identifying the difficulties users face while importing and preparing datasets and providing a spreadsheet-based solution that makes the process easier, faster, and more reliable.

Purpose:

- ☐ Simplify dataset importing by allowing users to easily upload datasets through a spreadsheet interface.
- ☐ Reduce data preparation difficulties by automatically identifying and handling missing values, duplicate records, incorrect formats, and inconsistent data.
- ☐ Transform datasets efficiently using spreadsheet-based transformation features such as filtering, sorting, formatting, and data conversion.
- ☐ Improve data accuracy and consistency by validating the imported dataset before it is used for further analysis.
- ☐ Save time and effort by reducing repetitive manual data-cleaning and transformation activities.
- ☐ Provide an easy-to-use solution that allows users to preview, modify, transform, and export the final dataset.
