

Project Design Phase Solution Architecture

Date	30 September 2026
Team ID	SWTID-2026-4540
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- ☐ Import data from spreadsheets such as Excel or CSV files into ServiceNow.
- ☐ Use a Transform Map to map spreadsheet fields to the corresponding target table fields.
- ☐ Transform and validate data before inserting or updating records.
- ☐ Define field mappings, data transformations, and import requirements.
- ☐ Ensure accurate and organized data is loaded into the ServiceNow system.

Example – Import Data Using Transform Map (Spreadsheet)
