

Import Data using Transform Map (Spreadsheet)

SCENARIO

Importing spreadsheet data using a Transform Map.

Entice

How does someone initially learn and start this process?

Steps

What are the key steps to import data using a Transform Map?

1. Prepare spreadsheet

- Check headers
- Clean data

2. Open Import Sets

- Go to Import Sets
- Create new import set

3. Upload spreadsheet

- Choose file
- Set data source

4. Map fields with Transform Map

- Select table
- Configure mapping

5. Run transform

- Start transform
- Check status

6. Verify imported records

- Check target table
- Validate data

Interactions

What tools, features and components are involved in this process?

ServiceNow Import Sets

- Create & manage import sets

Data Source

- Spreadsheet file
- File upload

Transform Map

- Map source to target
- Set field rules

Field Mapping

- Column to field
- Data type handling

Transform Run

- Execute mapping
- View logs

Target Table

- Table in ServiceNow
- Holds imported data

Imported Records

- New / updated
- Available for use

Goals & motivations

What do users want to achieve and what drives them?

Clean data import

- No unwanted data
- Proper format

Correct field mapping

- Right columns
- Right data types

Avoid errors

- Reduce failures
- Catch issues early

Save time

- Simple process
- Less manual work

Verify records

- Check in target table
- Ensure accuracy

Positive moments

What makes the user feel good or successful in this process?

Successful upload

- File uploaded
- No errors

Correct mapping

- Fields mapped
- Rules applied

Records created

- Data in target table
- Status successful

Easy verification

- Clear view
- Data looks correct

Negative moments

What problems, frustrations or blockers do users face?

Wrong column mapping

- Data in wrong fields
- Misaligned headers

Missing / invalid data

- Blank values
- Wrong format

Transform errors

- Rule failures
- Job not completed

Duplicate records

- Multiple entries
- Data conflicts

Unclear error messages

- Hard to understand
- No clear fix

Areas of opportunity

How can this process be improved to make it easier, faster and more reliable?

Template spreadsheets

- Predefined format
- Example file

Automatic field suggestions

- Detect columns
- Suggest mappings

Validation before transform

- Check data quality
- Show warnings

Clear error messages

- Explain the issue
- Suggest next step

Duplicate detection

- Find existing records
- Allow resolution

Import preview & progress

- Show sample data
- Track progress bar
