

Project Design Phase-II Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-4540
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

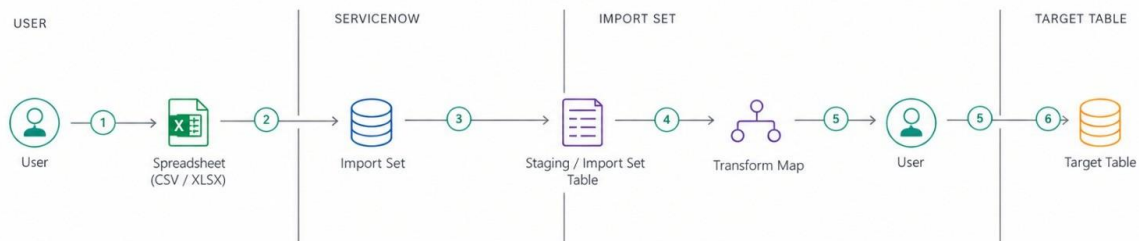

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

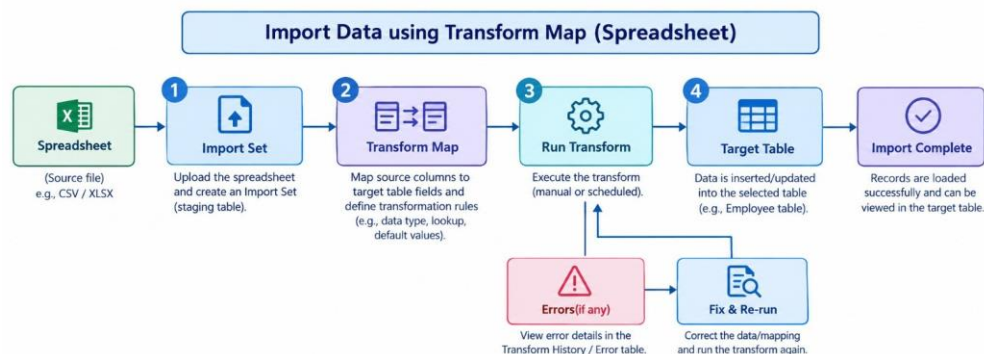

Example:

Example: [\(Simplified\)](#)

Flow

1. User prepares the spreadsheet containing the data to import.
2. User uploads the spreadsheet using Import Sets.
3. ServiceNow loads the spreadsheet data into the Import Set table.
4. Transform Map maps source fields to target fields.
5. User runs the transform to process the imported records.
6. Transformed data is inserted or updated in the target table.

User Stories

Use the below template to list all the user stories for the product.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow User	Import Data	USN-1	As a user, I can upload a spreadsheet (CSV/XLSX) to import data into ServiceNow.	Spreadsheet uploads successfully and an Import Set is created.	High	Sprint-1
ServiceNow User	Import Data	USN-2	As a user, I can preview the imported spreadsheet data before transformation.	Import Set rows are visible and match the spreadsheet.	High	Sprint-1
ServiceNow User	Import Data	USN-3	As a user, I can create a Transform Map to map source fields to target table fields.	Required source fields are mapped to the correct target fields.	High	Sprint-1
ServiceNow User	Import Data	USN-4	As a user, I can run the Transform Map to transform and load the imported records.	Records are inserted or updated in the target table.	High	Sprint-1
ServiceNow User	Import Data	USN-5	As a user, I can view transform results and identify import errors.	Transform history shows successful and failed records with error details.	Medium	Sprint-2
ServiceNow User	Import Data	USN-6	As a user, I can correct mapping or data errors and re-run the transform.	Corrected records are processed successfully after re-run.	Medium	Sprint-2
ServiceNow User	Import Data	USN-7	As an administrator, I can verify the imported records in the target table.	Target table contains accurate and complete transformed data.	Medium	Sprint-2
